

Value-Based Care, Powered by Population Insights

In an era where health care organizations face mounting pressure to drive meaningful improvements in patient outcomes, reduce costs and address disparities, population health management has emerged as a critical focus. That's where the Johns Hopkins ACG® System comes in.

Using the world's longest, leading and most extensively used population health analytics system, you'll be able to uncover the full story behind your patients' health needs.

Global Solutions, Local Implementation

Acuity combined with the rigor of Johns Hopkins experts who maintain, enhance and validate the ACG System based on evolving health care standards and trends means a system that is tailored to work for you. It's why public health officials, health insurance administrators and health care providers globally have relied on the ACG System for more than 30 years.

With the ACG System, you'll gain a holistic view of the population alongside a patient-centered understanding of individual health needs. Use these informative insights to improve patient outcomes, lower health care costs and optimize resource allocation — especially valuable to risk-bearing health systems and provider organizations.

**Let's innovate the future of health care
together through data-driven action.**

How it Works

The ACG System translates complex clinical, specialty and social determinants of health data into a clear, actionable view of opportunities to improve outcomes. Its analytic outputs seamlessly integrate into existing tools and analytics, delivering data-driven insights that are easy to interpret and apply.

We focus on:

Population Profiling

World-leading patient segmentation methodology groups populations based on similar health needs, enabling providers to identify and prioritize subgroups for targeted interventions and efficient resource allocation.

Case Management

Identify patients across the full spectrum of health needs who can benefit from tailored, targeted, data-driven interventions, which include proactive care management, preventive care, wellness initiatives and education services.

Program Effectiveness

Leverage case-matching and equitable benchmarks to optimize care programs, monitor outcomes and accurately measure ROI to enhance cost and care efficiency.

Finance, Budgeting and Resource Allocation

Assess demand for services and allocate appropriate financial and staff resources by leveraging concurrent and predictive risk models for more accurate planning.

Used in over
20 countries

Impacting over
200 million lives

One System, Countless Results

“With the ACG System built into Primary Sense, clinicians can swiftly identify high-risk patients, predict their future health care needs, and assist them in making informed decisions at the point of care. Our providers have real-time patient health information that is powerful for improving health outcomes.”
