

Information, Prioritization, Innovation

Discover the Power of the ACG® System

In an era where health care organizations face mounting pressures to improve patient outcomes, reduce costs and address disparities, population health management has emerged as a critical focus. That's where the Johns Hopkins ACG System comes in.

As the world's longest, leading and most extensively used population health analytics system, health care analytics companies have been supporting public health officials, insurance administrators and providers with the ACG System for more than 30 years. We accelerate time-to-value for your product by delivering fast, credible insights — freeing up your team to focus on growth while Johns Hopkins ensures model accuracy, stability and success.

Why We're The Leading Enterprise Solution

Seamless Integration

Our robust analytic outputs seamlessly integrate with existing tools, delivering globally-trusted risk stratification, predictive analytics and population segmentation.

Tailored Excellence

Out-of-the-box excellence with options to customize means the ACG System is flexible enough to meet your customers' unique needs and goals.

Rigorous Development & Testing

Save time by relying on Johns Hopkins experts who maintain, enhance and validate the ACG System based on evolving health care standards and trends.

Meaningful Insights

The ACG System is data-agnostic, translating complex clinical, specialty and social determinants of health data from multiple sources into clear, actionable opportunities.

Used in over

20 countries

Impacting over

200 million lives

Let's transform your clients' capabilities for maximizing health care.

The Proven Engine Behind Better Population Health

Clients who integrate the ACG System's analytics for predictive, data-driven strategies achieve enhanced outcomes and value-based care. They also benefit from ongoing innovation, maintenance and world-leading insights in population health, social determinants of health, emergency department classification and medication management.

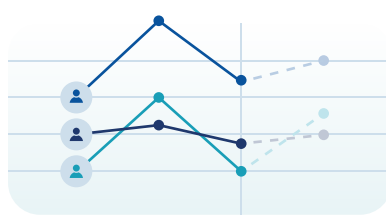

Go Deeper With the ACG System

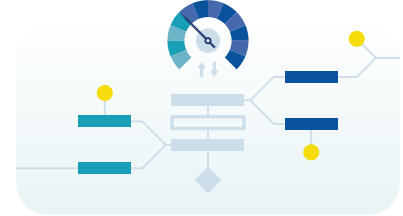

Clinical, Evidence-Based Segmentation

Group patients based on patterns of morbidity and overall health needs to help your clients effectively prioritize care for improved outcomes.

Predictive Cost & Utilization Models

Stay ahead with advanced analytics that allow your clients to proactively anticipate factors like future resource needs and risk for hospitalization, readmission and extended stays.

Emergency Department Visit Classification

Use the ACG System's proprietary ED classification algorithm to understand patterns of utilization, identify patients who may benefit from additional services and quantify and monitor cost savings.

One System, Countless Results

“The combination of the ACG System integrated into Graphnet's Population Health Platform offers a powerful solution for health care providers to use real-time data to segment patient populations, identify high-risk individuals, and implement targeted interventions. Whether for preventive care, chronic disease management, or urgent care triage, this powerful combination helps ensure the right care is delivered at the right time.”
