THE JOHNS HOPKINS OSLER SURVIVAL GUIDE
for adult hospital care

The Osler Medicine Survival Guide is an app designed to meet the urgent need of medical residents and other hospital-based clinicians. It serves as a reference for patient care at the point of care.

This unique app, available for Apple and Android, distills need-to-know information into easily accessible and rapidly viewed modules, helping health care professionals raise the standards of care and improve patient safety.

Osler Medicine Survival Guide features allow you to:

- Consult need-to-know information from experts at Johns Hopkins Medicine
- Access complex material, in easy-to-use format, covering major sub-specialties, on-call symptoms and common procedures
- Link directly to journal abstracts and full text
- Bookmark frequently viewed topics
- Locate answers quickly with Universal Index Search

The Guide has been updated annually by the Johns Hopkins Residency Program for more than 20 years. Topics are validated by Johns Hopkins clinical experts.

The expanding body of medical knowledge, and growing complexity of diagnoses and treatment options, pose a great challenge for early-career physicians and others caring for adults in a hospital setting. Knowing what to do in real time for the patient right in front of them is an exercise they face multiple times a day.

Whether they are hustling to the ER and need to confirm what lab tests to order or visiting a patient bedside, and need to know what exam to perform or what treatment should be prescribed, The Guide provides evidence-based information written by clinicians for clinicians so they can offer the best care to the patient right in front of them.

About the Osler Medical Housestaff Training Program at Johns Hopkins

The goal of the Johns Hopkins Residency Training Program is to train future leaders in medicine. Sir William Osler founded the program in 1889 on the principle that medical education should be patient-based and succeeds best when conducted in an atmosphere of collegiality.

“Finally a medical guide that actually tells you what to do when you really need it!”
-Medical Resident

Why Choose a Johns Hopkins Solution?

For more than 125 years, Johns Hopkins has led the way in both biomedical discovery and patient and population care. Faculty research most often leads to innovative protocols, programs and services, establishing the standard by which others follow and build upon. Our goal: make these innovations available beyond our walls to improve the health outcomes of individuals and populations—within our community and throughout the world.
